Patient Care Response Challenges

Patient Care Monitoring Solutions

About Buddy and LIFX

Patient Care Response Challenges

Patient Care Response Challenges

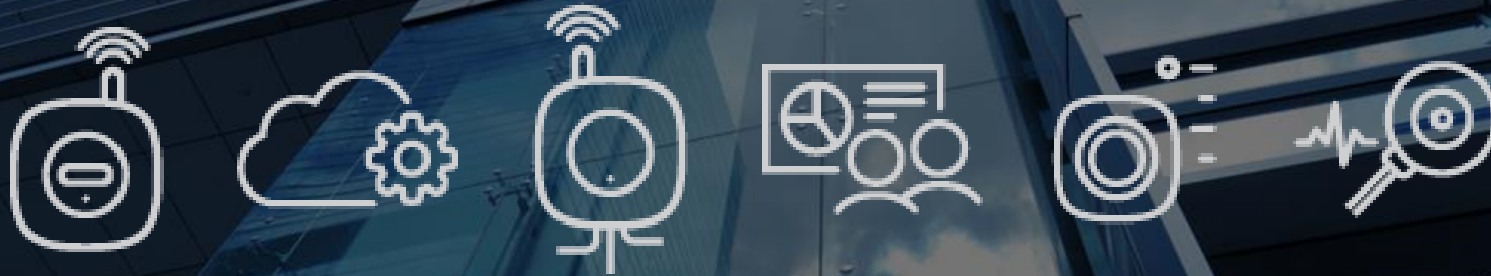

Responding to Patient Needs

- Changing patient conditions often require a patient or healthcare provider to request assistance for routine or critical situations
- Distance to other care providers or noise may not allow for effective verbal communications

Management of Rooms/Beds

- Demand for rooms and beds is becoming critical in many facilities and the need for management of these precious resources is more important than ever
- Written or verbal records are often lost in the urgency of many facilities today

Patient Care Monitoring Solutions

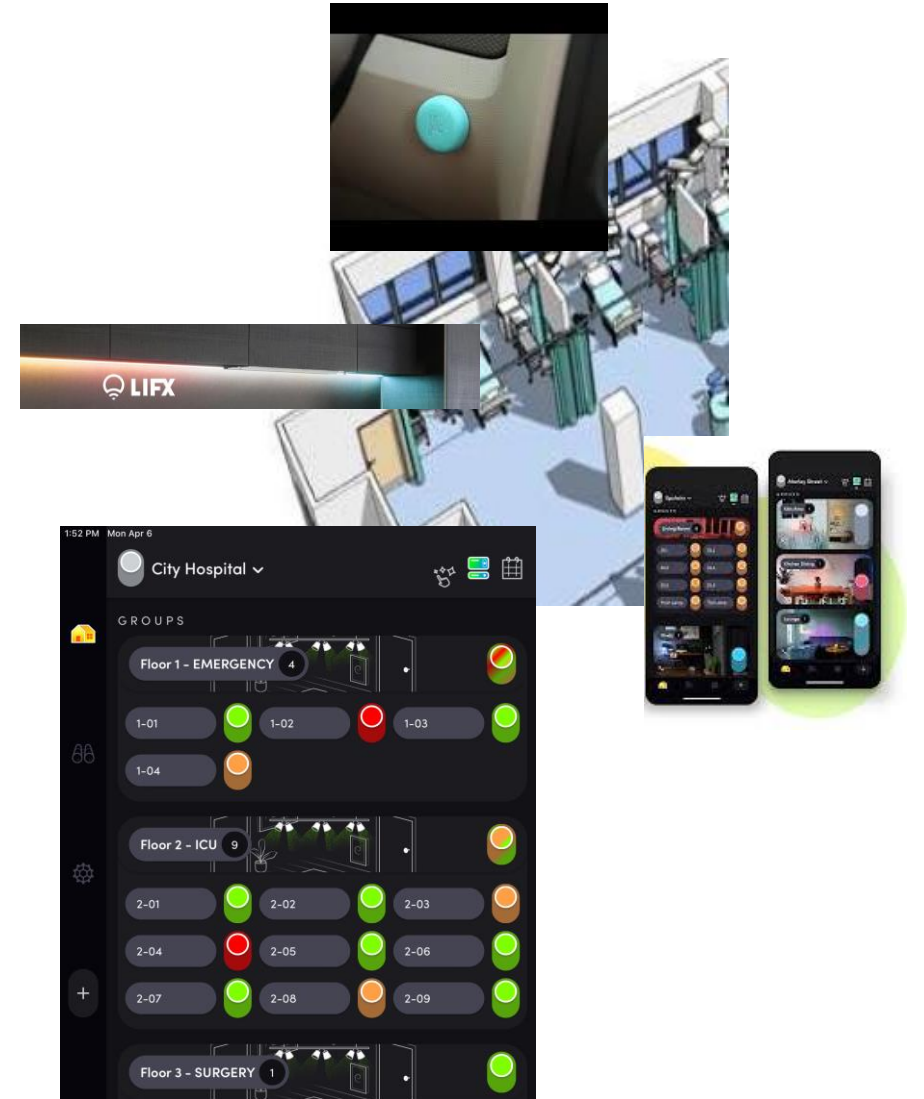

Patient Care Monitoring Solutions

Patient Care Response

Smart LED Lighting above or near each patient care area that can be controlled by patient or healthcare provider via button or to instantly notify staff of a change in condition or care required. Floor status on tablet and projected to a central monitor

Solution

1. LIFX LED Light Strip capable of many colors and settings to indicate care state (e.g. Green=OK, Amber=Assistance, Red=Urgent)
2. Flic Button for patient or healthcare provider to indicate care state (e.g. 1-click=Amber, 2-click=Red, Hold=Green)
3. Will instantly change the color of the LIFX LED Light Strip that is highly visible to all care providers in the area
4. Simultaneously updates location-specific (e.g. ICU) tablet and display screen
5. Can be reset to Green or other color (state) from Flic Button or location-specific tablet
6. Multiple groups can be viewed for a hospital or multi-zone monitoring

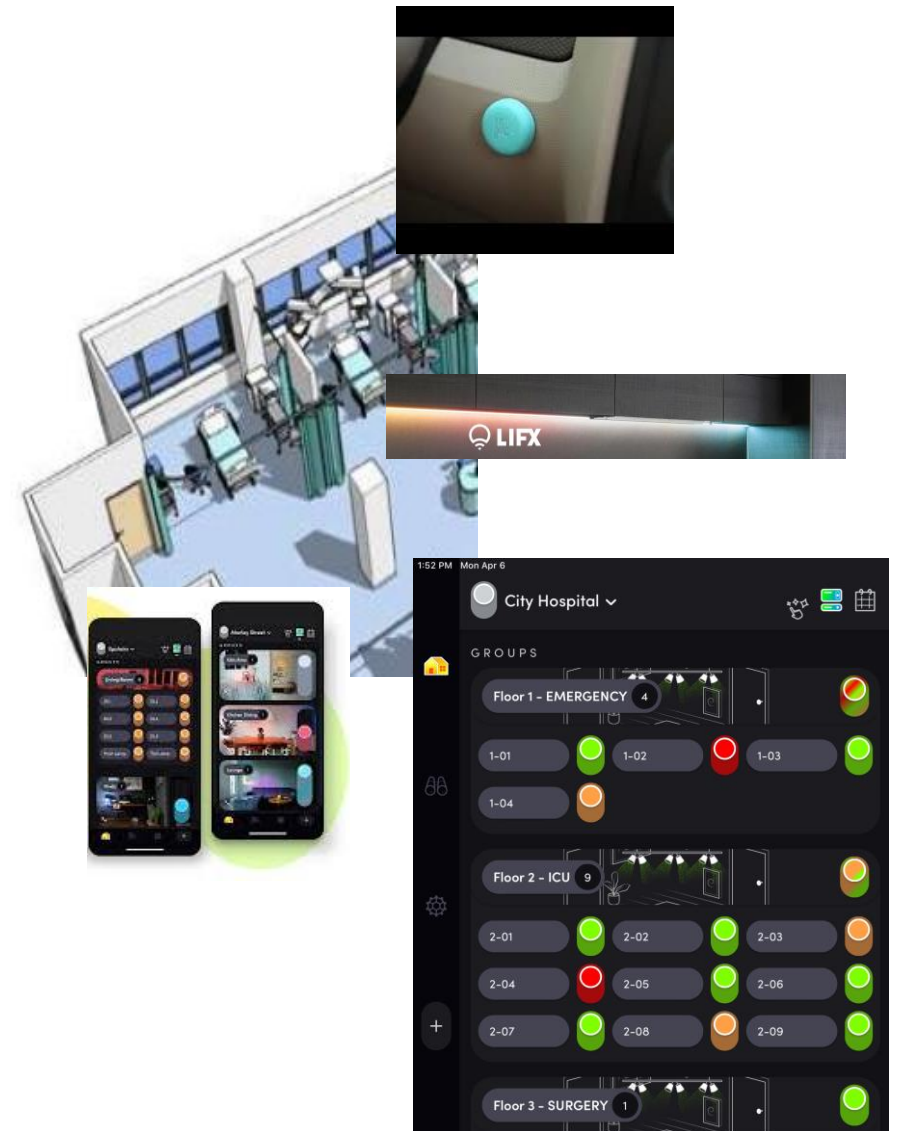

Patient Care Monitoring Solutions

Management of Rooms/Beds

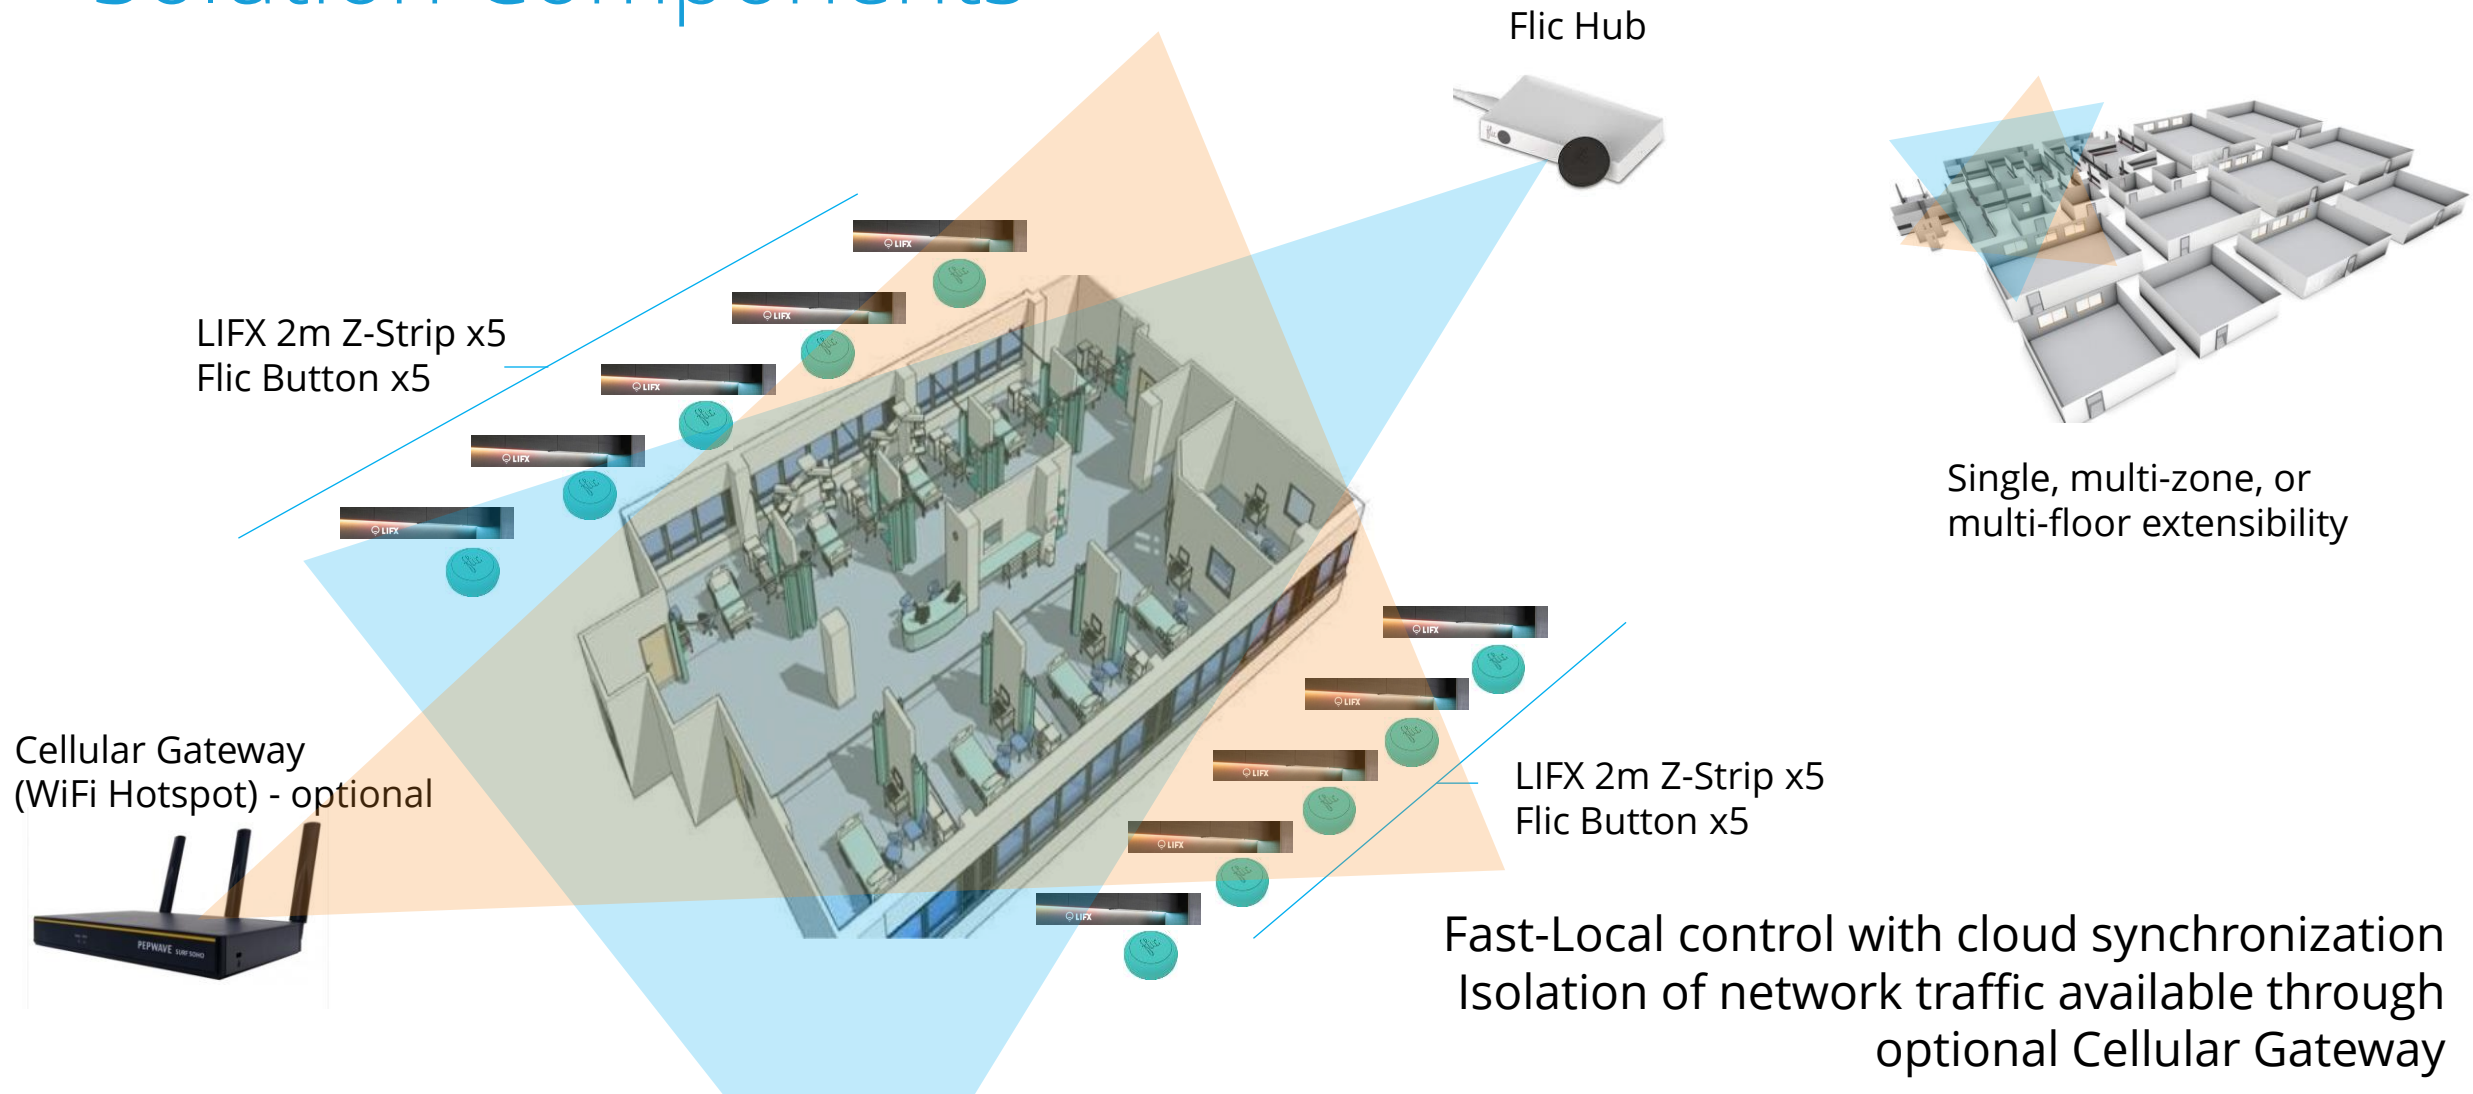

Smart LED Lighting above or near each patient care area that can be controlled by cleaning staff or healthcare provider via button to instantly notify staff of a room availability. Floor status on tablet and projected to a central monitor

Solution

1. LIFX LED Light Strip capable of many colors and settings to indicate care state (e.g. Blue=Occupied, Purple=Empty/Needs-Cleaning, White=Available)
2. Flic Button for cleaning staff or healthcare provider to indicate room state (e.g. 1-click=Blue, 2-click=Purple, Hold=White)
3. Will instantly change the color of the LIFX LED Light Strip that is highly visible to all care providers in the area
4. Simultaneously updates location-specific (e.g. ICU) tablet and display screen
5. Can be reset to White or other color (state) from Flic Button or location-specific tablet
6. Multiple groups can be viewed for a hospital or multi-zone monitoring
